

F&J SPECIALTY PRODUCTS, INC.

The Nucleus of Quality Air Monitoring Programs

F&J manufactures traditional and microprocessor controlled air sampling systems, airflow calibrators, tritium collection systems and lightweight battery powered emergency response air samplers, including portable continuous air monitors.

F&J manufactures advanced-technology fixed station high volume air samplers for ambient air monitoring programs. The F&J high volume air samplers achieve the highest flow rates attainable in the industry. Sophisticated data acquisition software is available for certain models.

F&J is also the world's largest manufacturer of radioiodine collection cartridges, such as TEDA impregnated charcoal and silver zeolite cartridges utilized in nuclear facilities and by radiological emergency response teams.
