

**Publication Agreement - Updated Conference Information (EST2005)
(December 11, 2004)**

The EST Conference Organizing Committee has made an agreement with the Editorial Board of ***Engineering in Life Sciences*** to publish a special ICEST (International Conference on Environmental Science and Technology) issue. After publishing the conference proceedings, the Scientific/Technical Committee of the conference will recommend some papers to this special issue for further discussions. Authors can re-organize their papers in a format with more flexible length, more allowed details and better quality printing including color images. They can also choose to modify their paper's title.

Engineering in Life Sciences (now merged with Acta Biotechnologica) serves as a worldwide forum for the exchange of scientific information, its interdisciplinary character supports the transfer of scientific results of environmental, industrial, agricultural and food biotechnology, and health care into technological processes. This journal is cited by SCI and is recognized as one of the world's leading publications in this field.

Papers for which their authors have registered as regular and university/government registrants will be picked up for further review and consideration.
